Non-Covered Services

There are services that Medicare and other insurance companies do not cover. It does not mean that these are not important services for you to have. It only means your insurance policy does not include them in coverage. Independent diagnostic procedures are considered to be those that go beyond the services included in a general ophthalmological exam or those in which special treatment is given. Most insurance companies only cover basic, routine examination procedures and do not have allowances for procedures beyond the basic service. These independent diagnostic procedures will be performed when they are deemed to be visually or medically necessary for the well being of the patient. Though your visual insurance may not cover these procedures your major medical insurance may cover them.

The following are examples for some of the services that are provided by Drs. Moser and Hudgins, that are, or may be considered non-covered by your insurance carrier. You will be expected to pay for these services:

- Refraction's
- Contact lens fitting
- Eyeglass/contact lens materials
- Oculomotor diagnostic exam
- Vision Perception exam
- Extended Ophthalmoscopy
- Fundus photography
- Contact lens progress examinations
- Extensive visual field evaluation
- Foreign body removal
- Post surgical treatment & management
- Therapeutic management
- Dye eye analysis & management
- Gonioscopy
- Anterior Segment photography

I agree that I am personally and fully responsible for payment for these services and any other non-covered services I receive at Drs. Moser and Hudgins.
